Carrying Twins or More | BabyCenter

Genetics play a big role in determining whether you'll have twins or not. Research published in 2007 suggests that a woman's chance of having twins is double if her mother or sister had twins. But, interestingly enough, this only applies to fraternal twins. Among families with a history of twins, there are few with identical twins.

All About Twins, Triplets, and More

Twins are more common in large and tall women than in small women (in an often-cited study, women who gave birth to twins were on average more than an inch taller than the average female, or 5 feet 5 inches vs. 5 feet 3 $\frac{3}{4}$ inches). Experts say it's likely again because taller women have higher levels of IGF.

Chances of Having Twins - What to Expect

DZ twins occur when two eggs are released during the same menstrual cycle, and are fertilized by two different sperm cells. The genetic factors that may cause hyperovulation have not been identified. There is no genetic testing available for them. Identical twins don't generally run in families, but fraternal twins do.
