Statistical Methods for Recommender Systems. Designing algorithms to recommend items such as news articles and movies to users is a challenging task in numerous web applications. The crux of the problem is to rank items based on users' responses to different items to optimize for multiple objectives.

(PDF) Analysis of Recommender Systems' Algorithms

In addition to the similarity methods, for content based recommendation, we can treat recommendation as a simple machine learning problem. Here, regular machine learning algorithms like random forest,

accuracy in recommender systems (RS), so they have been taken into consideration in many existing RS, where all feature interactions are modeled. Nevertheless, not all feature interactions have positive effects for RS: modeling the irrelevant feature interactions may introduce noises and degrade the accuracy. To overcome this problem, in ...
